# Context

Debugging slow queries

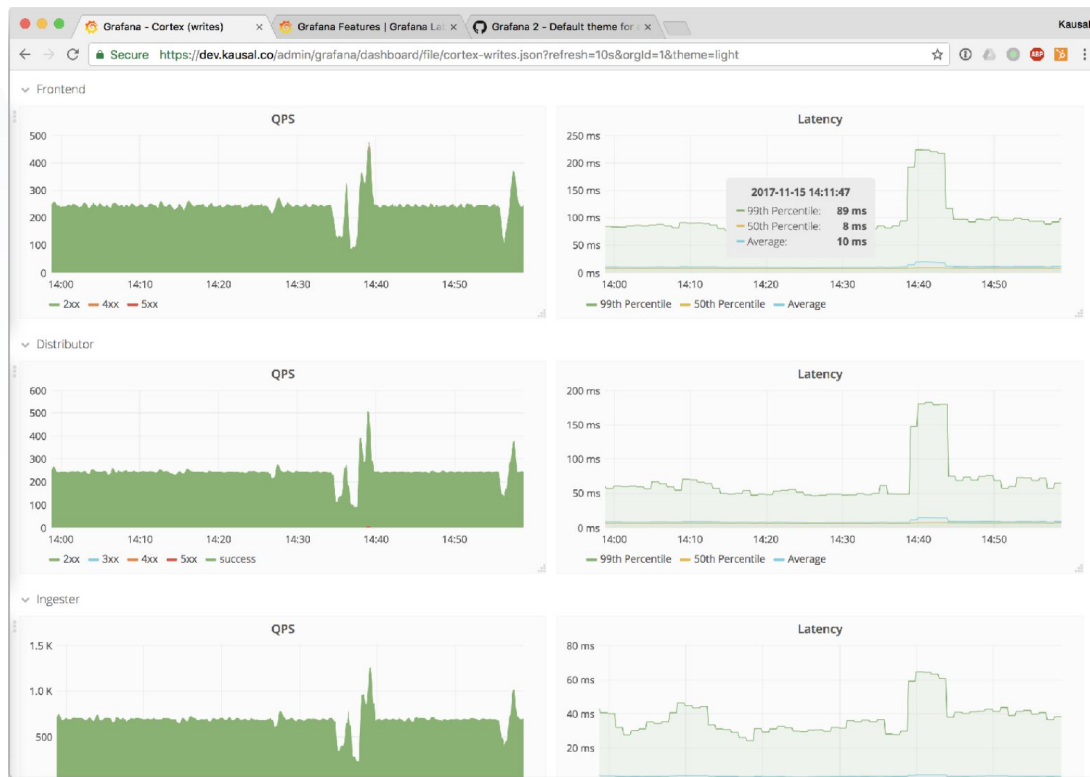

- ➔ Write Path
- ➔ Query path
- - ➔ Control requests

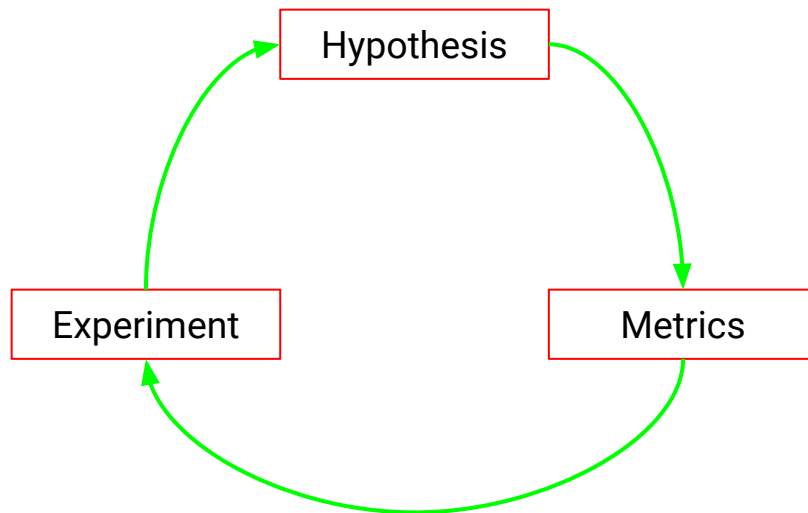

# A few large queries are slow

# RED Method

# Soooo whats slow?

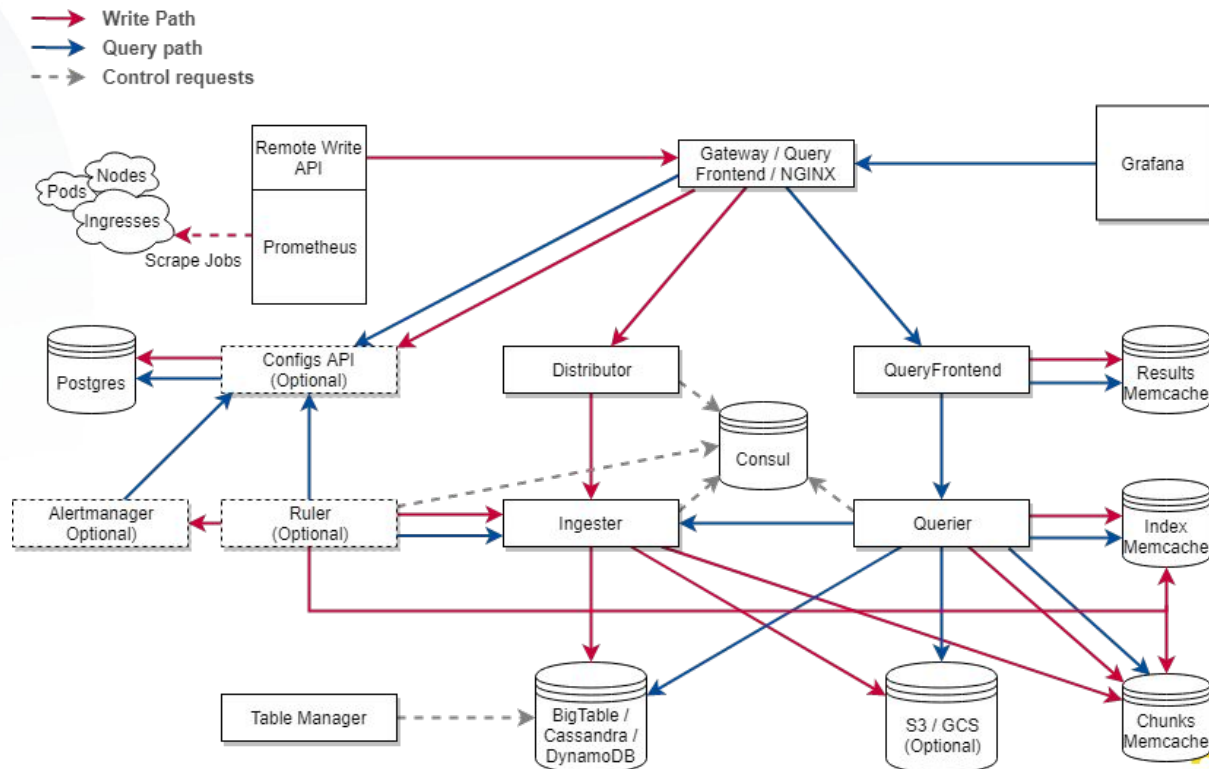

# Jaeger

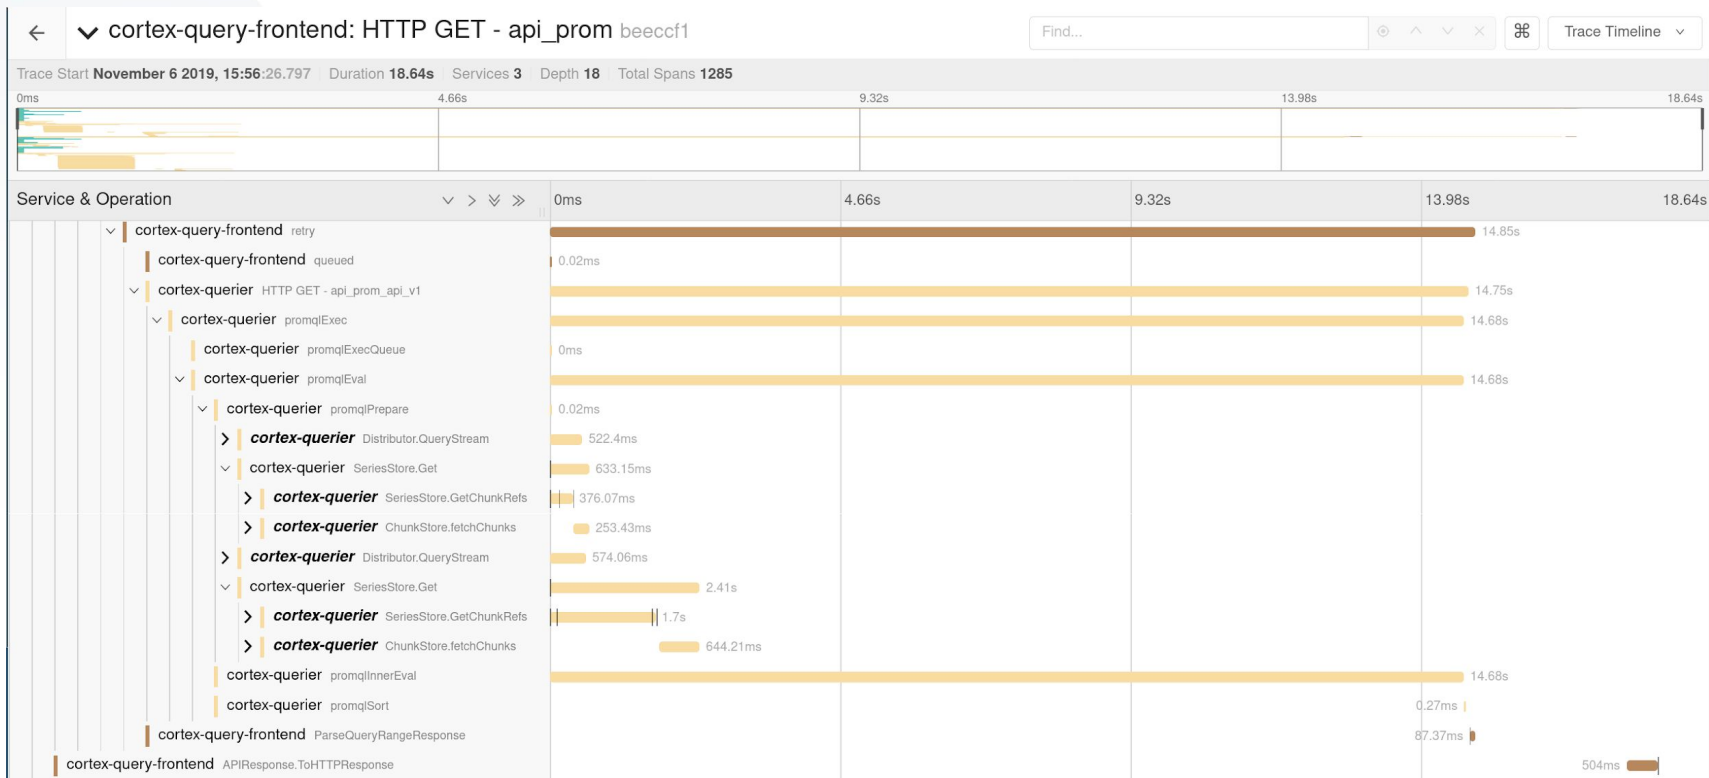

Saving my arse since June 2018

# Soooo whats slow?

# Soooo whats slow?

# Demo

# Is Jaeger the solution to everything?

JBD @rakyll · 7h

The current trace model is a bad model because it cannot highlight uncompleted trace spans. What we often say: "Don't trust your traces before you make sure they are not partial."

Liz Fong-Jones (H H P) @lizthegrey · 15h

None of Honeycomb's traces showed this because the traces in flight were destroyed by the OOM and never transmitted to metamonitoring. The black box monitor of AWS ALB logs did tell us we had a problem, but we misinterpreted the signs.

Another retrospect graph of the stampede:

# Per environment traces?

- Several clusters but central jaeger

# Enriching traces

Backstage Blog September 18th, 2018 [Engineering](#) [Microservices](#)

## Using Kubernetes Pod Metadata to Improve Zipkin Traces

By [Steve Conover](#)

SoundCloud is built on hundreds of [microservices](#). This creates many challenges, among them debugging latency issues across the services engaged in the completion

# Enriching traces

- Just add namespace and clustername, use env vars

```
jaeger_mixin::  
  if $_config.jaeger_agent_host == null  
  then {}  
  else  
    container.withEnvMixin([  
      container.envType.new('JAEGER_AGENT_HOST', $_config.jaeger_agent_host),  
      container.envType.new('JAEGER_TAGS', 'namespace=%s,cluster=%s' % [$_config.namespace,  
$_config.cluster]),  
      container.envType.new('JAEGER_SAMPLER_MANAGER_HOST_PORT', 'http://%s:5778/sampling' %  
$_config.jaeger_agent_host),  
    ]),
```

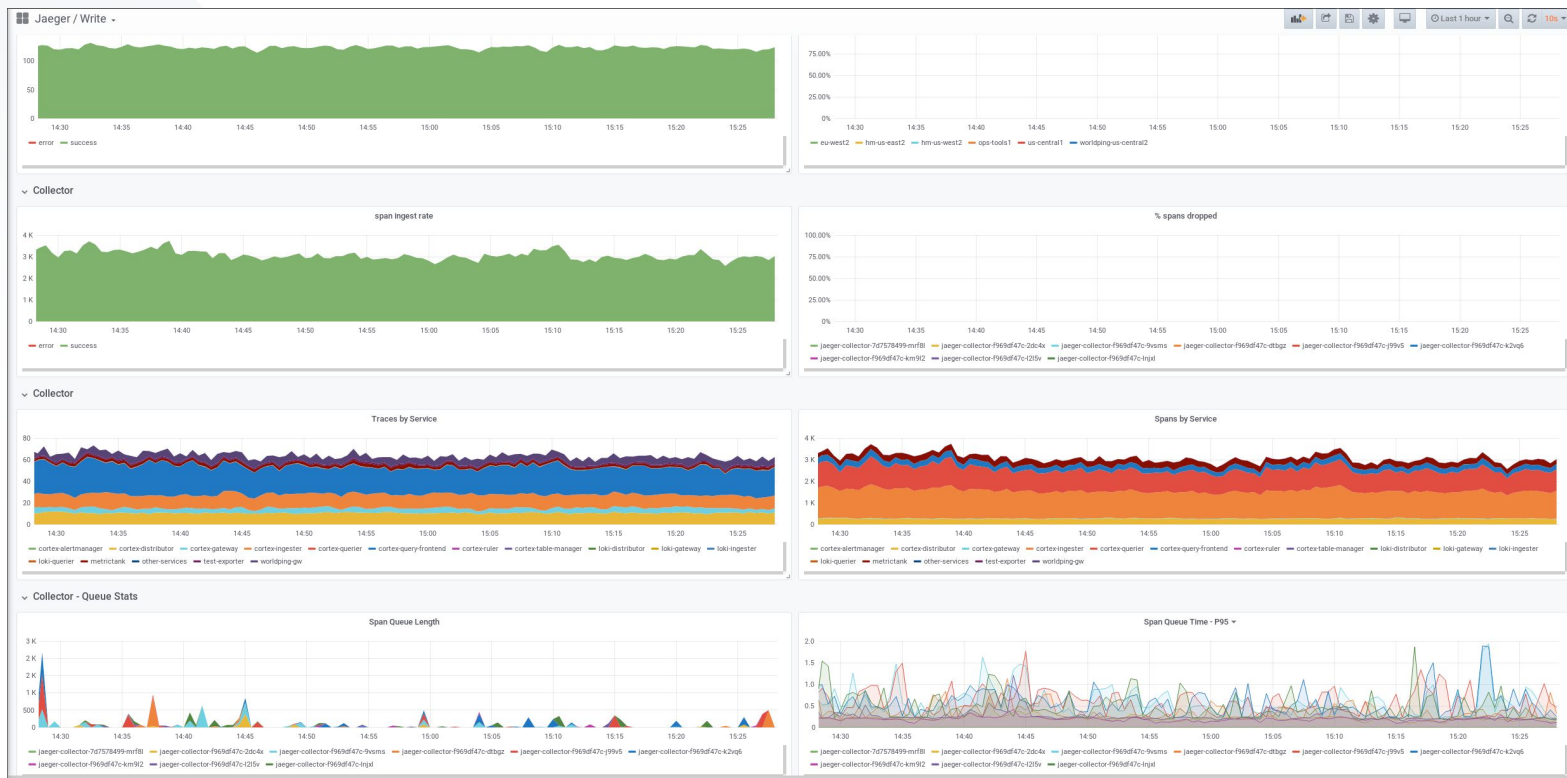

# Per environment traces?

- Several clusters but central jaeger

# Monitoring Jaeger with Prometheus

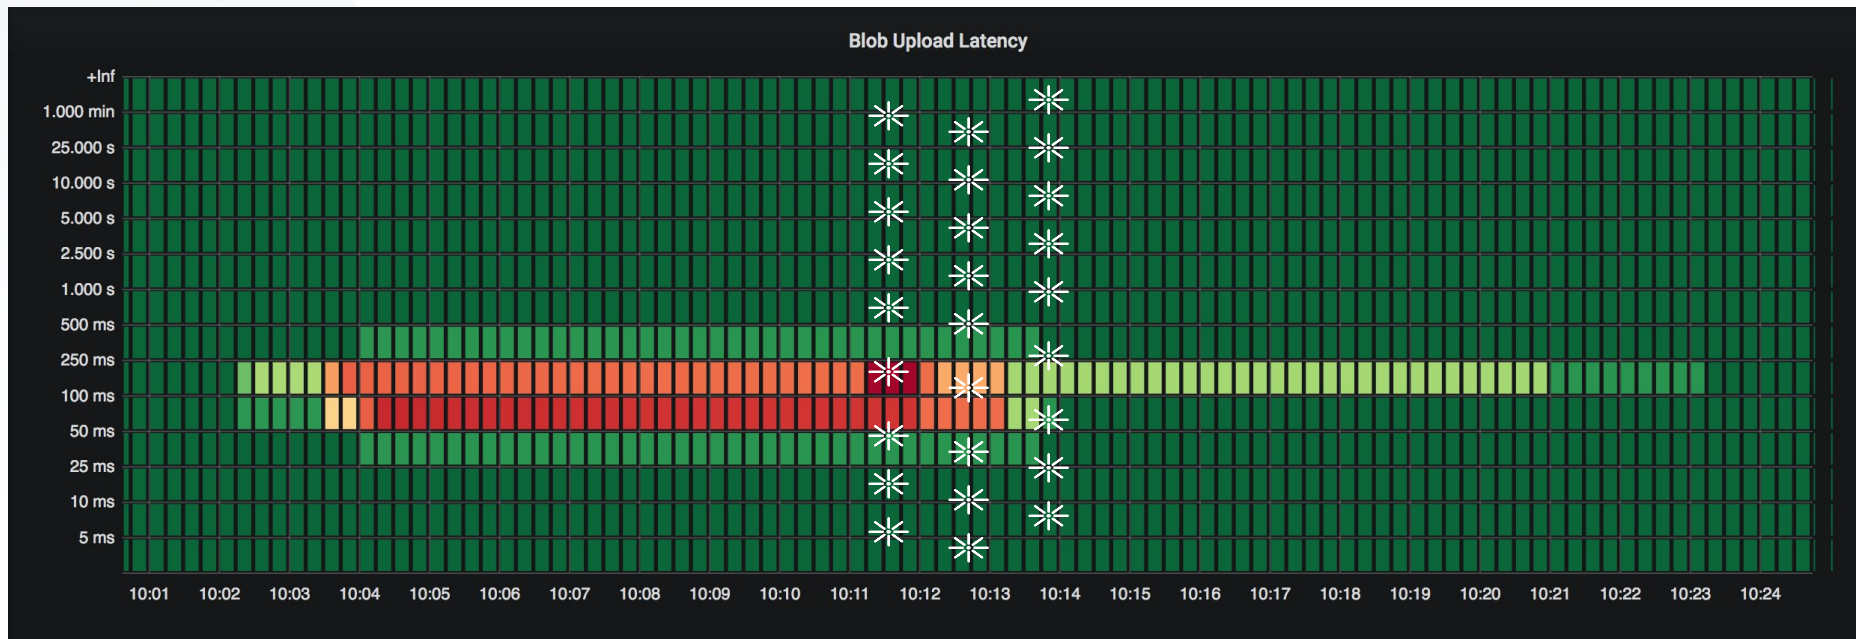

# The Future

We're only scratching the surface

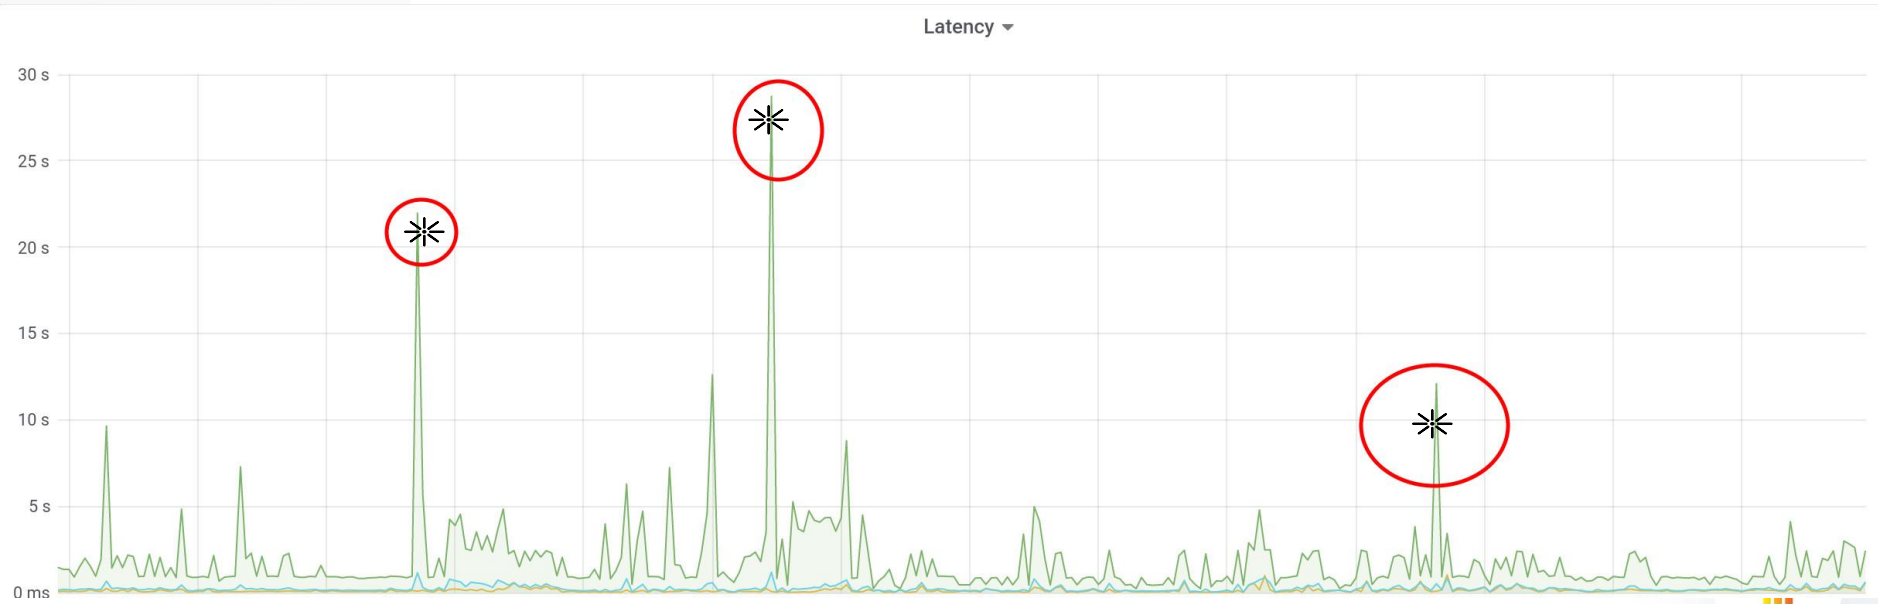

# Exemplars: Seamless flow

# Exemplars: Seamless flow

# Exemplars: Seamless flow

# More future

- Grafana has tracing built in (Jaeger being first)
- Integrate the logs and traces and metrics
- Built in UI for visualising Prometheus queries
- Conprof

# Recap

# Recap

- Jaeger is awesome for debugging latency
- Alerts → Dashboard → Jaeger, make sure the flow works
- The `jaeger_mixin` helps you tame Jaeger
- Exemplars are coming!

# Questions!
